FAAHFAAHINTA KU SHAQEYNTA DOOR SOOMEYAASHA

HORDHAC

Muhimada ugu weyn ee cuttubkani waa in Ardyda lala qabadsiiyo Doorsoomeyaasha iyo in laga dhigo kuwo awood u yeesha si ay ugu isticmaalaan doorsoome yaasha inay ku xaliyaan masalooyinka la xidhiidha nolol – maalmeedkooda ee heerkooda taaso ay kula kulmi karaan maddooyin kala duwan sida sayniska. Laga soo bilaabo heerkoodii fasaladii hoose waxaa lagu soo baranayay tirinta tirooyinka ama mid ku began oo ah isugaynt hal talaabo iyo isugaynta labo talaabo iyo waliba xisaabfalo badan oo leh ururada tirooyinika sid tirooyinka idil, abiyoona, tirooyinka lakab i.w.l. Ayaa ka shaqeeya la odhan. Cuttubkani wuxuu la micno yahay in ardaydu ku horumaraan heer cayiman oo kala goynta ah sidoo kale waxay si fiican u dabikhi doonaan Iisticmaalka xeerarka Aritmetiga ayagoo isticmaalaya Doorsoomeyaal.

Tusaale ahaan:- Ardaydu si fiican ayey u yaqaanaan in $3 + 4 = 4 + 3 = 7$, xeer la mid ah ayaa laga yaabaa in lagu dabakho Aljebrada, halka tirooyinkii lagu bedeley doorsoomeyaal sida: $x + y = y + x$

Baruhu ha ka dhigo mid cad isticmaalka doorsoomeyaashu in uu la mid yahay waxay ku soo qabteen Aritmeetikada tirooyin ka.

Ujeedooyinka Cuttubka

Marka cuttubkani dhammaado dabadeed Ardaydu waxay Awoodi doonaan in ay:-

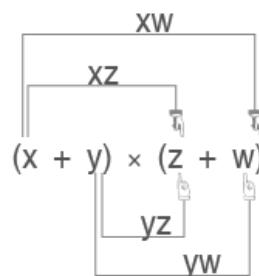

- *Xaliyaan masalooyinka la xidhiidha Nolol maalmeedka ayagoo isticmaalaya doorsoomeyaal*
- *Isku-dhusfaan laba – tibxaale iyo hal – tibxaale, dabadeedna ay go'aamiyaan ama soo saaraan taranata laba – tibxaalaha ah*
- *Go'aamiyaan isirka ugu weyn ee ay wadaagaan tibaaxaha aljebraad.*

Kaabayaasha waxabarasho ee loo doorbiday cuttubka 2aad

Inkastoo tusmooyinka cuttubka 2^{aad} inta badan yahay aljebra, uuna yahay Xisaabin taasoo lagaga shaqeeyo warqad Dusheed, waxaa laga yaabaa in aad u diyaariso, waxyalo kaabeyaal ah si aad ugu caddeysa Maareynta Doorsoomeyaasha iyo isticmaalkooda loo isticmaalo qaaciidooyinka kala duwan iyo xalinta Masalooyinka.

- Shax tusinaysa xeerar xisaabeed oo kala duwan
- Shax tusinaysa xeerka Aasaaska isku – dhufashada ee laba – tibxaale lagu dhufto labatibxaale kale.
- Shaxo ka kooban qaaciidooyin kala duwan sida qaaciida Bedka shaxanada joometeri ee kala duwan iyo qaaciidooyinka laysugu bedelo halbeegyada heerkulka ee kala duwan
- Shax tusinaysa sida tibxaha laysugu geeyo marka laba – tibxaale laysku dhufto $(x + y)(w + z) = xw + xz + yw + yz$

Hordhac

Muhimada ugu weyn ee cuttub – hoosaadkani waa in la Nakhtiimo Fikradaha tibxaha aljebraad iyo tibaaxaha kuwaaso Ardaydu ay ku soo barteen Fasaladii hoose.

Waxa kale oo la Nakhtiimi waxyaalaha ku saabsan doorsoomeyaasha iyo tibaaxaha cuttub – hoosaadkan waxaa loo qeybiyaa seddex cinwaan hoosaad oo waaweyn qeybta koowaad waxay ka hadashaa isticmaalka doorsoomeyaasha loo isticmaalo qaaciido.

Cinwaan – hoosaadkan, waxaad kaga doodi doontaa sida loogu dabakho door some yaasha qaaciidooyin loo isticmaalo xisaabinta bedadka iyo wareegyada joomatariga.

Cinwaan hoosaadka labaad iyo ka saddexaad waxay ka hadlaan

Doorsoomeyaasha iyo tibaaxaha iyo isticmaalka loo isticmaalo doorsoomeyaasha si loogu xaliyo masalooyinka. Cuttub – hoosaadkan waxaad ardayda u tilmaami doontaa inay fududeeyaan tibaaxo la siiyey ayagoo isu – ururinaya tibxaha isku midka ah xalinayana masalooyinka la xidhiidha Nolol Maalmeedka ayagoo isticmaalaya doorsoomeyaasha.

2.1.1 Isticmaalka Doorsoome yaasha loo Isticmaalo Qaaciidooyinka

Halkani waxaa laga yaabaa in aad ku barto Ardayda fikradaha qaaciidooyinka adigoo taxaya waxyaalo ka mid ah

Kuwa aan u isticmaalo Nolosha caadiga ah.

Tusaale ahaan:- Sayniska, waxaa laga yaabaa in Ardaydu ku barteen waxyaalo ku saabsan kulka iyo Heerkulka.

Waxa laga yaabaa inay barteen waxyaalo ku saabsan halbeega heerkulka iyo sida laysugu badalo heerkul lagu siiyey oo ku cabiran hal – helbeeg aan dhahno digrii sentigiraydh ku kale aan dhahno feeranhayt.

Xidhiidhka ka dhexeeya labada halbeeg waxaa lagugu siiyey qaaciidadan.

$$C = \frac{5}{9} (F - 32) \text{ Ama } F = \frac{9}{5} C + 32$$

Waxa intaa sii dheer in Ardaydu ay isticmaalaan qaaciidooyinka ay ku jiraan hal ama laba doorsoome si ay u xisaabiyaan bedadka iyo wareegyada shaxanada joometeri.

U sheeg ardayda in qaaciida taas oo ay ku furfuri karaan kuwa leh halka doorsoome, marka dhammaan qiimaha doorsoomeyaasha kale lagu siiyo.

Seer xisaabeedka ku haboon si loogu furfuro doorsoomaha qaaciido ayadoo lagu furfurayo doorsoome kale oo ku jira qaaciida.

- U gee qiime isku – mid ah labada dhinac ee isle’egta.
- Ka jar qiime isku mid ah ama tibxo isku mid labada dhinac ee isle’egta.
- Ku dhufo labada dhinac ee isle’egta tiro ama tibix aan eber ahayn.

Tusaale: ku furfur r qaaciidadan $A = \pi(R^2 - r^2)$

$$A = \pi(R^2 - r^2) \text{ ----- siin}$$

$$\frac{1}{\pi} \times A = \frac{1}{\pi} \pi(R^2 - r^2) \text{ --- Marka lagudhufto labada dhinacba } \frac{1}{\pi}$$

$$\frac{A}{\pi} = R^2 - r^2$$

$$\frac{1}{\pi} + r^2 = R^2 - r^2 + r^2 \text{ --- loogeeyo labada dhinacba } r^2$$

$$\frac{A}{\pi} + r^2 = R^2$$

$$\frac{A}{\pi} + r^2 = \frac{A}{\pi} = R^2 - \frac{A}{\pi} \text{ --- laga jaro labada dhinacba } \frac{A}{\pi}$$

$$r^2 = R^2 - \frac{A}{\pi}$$

$$r = \sqrt{R^2 - \frac{A}{\pi}}$$

$$r = \sqrt{R^2 - \frac{A}{\pi}} \text{ --- labada dhinacba laga saaro xidid laba jibaarka}$$

Jawaabaha shaqo kooxeedka 2.1

Tirada dhinacyada	Tirada xaglo – gooyaha
4	2
6	9
10	35
20	170

Fiiри in qaaciidada tirada xagalgooyeyaasha

N ee geesoolaha tuurta leh ee dhinacyadiisu yihiin n in lagu helo

$$N = \frac{n(n-3)}{2}$$

Geesoole kasta oo tuur leh waan sawiri karnaa xagal – gooyihiisa marka laga reebo labada gees ee is – xiga ee geesoolaha iyo geeska lagu siiyey laftiisa sidaas awgeed waxaan haysan karnaa $n(n-3)$ oo gees laba gees ee A iyo B xagal – gooyaha laga soo sawiray A ilaa B waxuu la mid yahay ka laga soo sawiray B ilaa A.

Sidaa awgeed waxaan u qeybineynaa maxsuulka xagga sare waxaa loo qeybin 2. Silooga hortago in aan la laba tirin, tani waxay ina siineysaa qaacidadii aan rabnay ee xagga sare leynagu siiyey.

Hadda wey fududahay in aan soo saarno tirada xagla – gooyeyaasha ee geesoole dhinacyadiisu yihiin inay tahay 4850.

Tani waxa laga yaabaa in ay adkaato in la helaa ayadoon la istimaalin qaaciido – ama habab kale.

Ayadoo lagu qabanayo koox ahaan, xubin kasta oo kooxda ka midahi waa in uu isku dayo isaga laftiisu.

Adiga shaqadaadu waa inaad ku wareegto Ardayda, aanad tiiriso kuwa u baahan caawimo, dhammaadka, weydii qaar ka mid ah Ardayda inay ku soo bandhigaan shaqadoodii sabuurada.

Cutub – hoosaadkani waxay aad u khuseysaa fududeynta tibaaxaha Aljebraad ayadoo ay ku caawinayaan xeerar – xisaabeedka ku habooni.

Ujeedaduna waa inaad hubisaa ardaydu inay la qabsadeen tibxaha lagama – maarmaanka ah sida doorsoomeyaal, tibxo iyo tibaaxo Aljebraad.

Halkan waxaad kari kartaa:-

- Inaad Nakhtiinto macnaha ama fikradaha tibxaha isku midka ah iyo kuwa aan isku midka ahayn.
- Inaad u tilmaantid ardayda inay fududeeyaan tibaaxaha Aljebraad ayag oo isku ururinaya tibxaha isku midka ah.

Waxaad bari kartaa tibxaha isu midka ah adigoo siinaya qeexida caadiga ah, dabadeedna u gudbaya sida loogu dabakho Nolosha dhabta ah, Tusaale ahaan.

Waxaad weydiin kartaa

Su'aasha sida:-

Haddii Nin haysto laba gobol oo xadhiga dabka ah oo mid yahay 1m dhererkiisu ka kalena yahay dhererkiisu 12sm waa maxay dhererka xaddiga uu haystaa?

Halkan dhererka laguguma siin halbeeg isku mid ah sidaas awgeed, ardaydu waxay samayn doonaan inay isu – geeyaan labada halbeeg ee aan islahay sida $1 + 12 = 13$, si ay uga jawaabaan waxay dhihi 13m ama 13sm, ayagoon

U bedelin halbeeg ka kale sida:-

$$1m + 12sm = 100sm + 12sm = 112sm$$

Ama $1m + 12sm = 1m + 0.12m = 1.12m$ u sheeg arday in xaaladaha la midka ee la adeegsado doorsoomeyaasha, aanu qof ku soo gabagabaynayni in wadarta x iyo $2y$ ay tahay $3x$ ama $3y$, ayagoon dhahayn $x + 2x = 3x$ ama $y + 2y = 3y$.

U sheeg ardaydaada xeerarka xisaabta ee L agama – maarmaanka ee loo isticmaalo talaabo kasta marka la fududeyn ayo

Tusaalah 1^{aad}: $x + 2y + 3x$

$(x + 2y) + 3x$ ---- Astaanta hormogalinta

$(2y + x) + 3x$ --- Kala hormarinta isageynta ee tibxaha qowska ku jira

$2y + (x + 2x)$ --- Astaanta hormogalinta

$2y + 3x$ --- isugeynta tibxaha isu midka ah

Tibaaxda u dambeysaa ma sii fududeysmayso waayo waxaa ka muuqda tibxo aan isu mid ahayn sida $3x + 2y$, kuwaasoo aan loo tixgalinayn in la sii fududeeyo.

Ogow: ku caawi ardyda in ay tibaaxaha Aljebraad u sii fududeeyaan heer ka ugu hooseeya ee suurtogalka ah.

Adigoo eegaya xeerar – xisaabeedka ee lagama – maarmaanka ah waxaad bari kartaa ardayda isticmaalka qowsas ka iyo sida loo kala horaysiinayo xisaabfalada sida:-

Kala Horsanaanta xisaabfaladu waa sidan:-

1. Furfur qowsaska, haddii ay jiraan, dabadeed haday u baahan yihiin qiimee.
Haddii ay yihiin in ka badan laba qows, ka bilow ka ugu xigga gudaha.
2. Furfur ama qiimee jibaarada, waa tirada kujibaaran.
3. Haddaad u qeybisid ama ku dhufatid waxba dhici maayaan.
4. Ugee ama ka goo.

Qiimeyn

Had iyo jeer waxaad u baahan tahay inaad ka fikirtid in Ardaydu inta ugu yar ee labay ardaygu inuu helo iyo waxbarashada cuttub – hoosaadkan waxa ka soo baxay halkan waxaa laga yaabaa inaad isticmaasho habab qiimeyneed oo kala duwan si aad u hesho jawaab celin ku saabsan fahamkooda. Sii masalooyin laylis ah, su'aalo la xidhiidh Nolosha, su'aalo Afka ah, shaqo kooxeed, hawlgalfasal, shaqo guri iyo shaqo guri ahaan waxay kaa caawin doonaan inaad qiimeyso Ardaydaa.

Miyaad dhaqan u leedahay inaad weydiiso laba su'aalo oo afka ah marka casharku dhammaado maalinkasta ama aad u qorto? Tani waxay kaa caawin doontaa in aad ardayda ku dhiiri galisid inay ka qeybgalaan hawlgalka casharka maalinkasta weyna Akhriyi doonaan casharkana.

2.2 ISKU – DHUFASHADA LABATIBXAALEYAASHA

(7 Xiso)

Waxa laga rabo ardayga

Dhammaadka cuttub – hoosaadkan,

Ardaydu waxay Awoodi doonaan in ay:-

- Go 'aamiyaan taranta hal – tibxaalaha iyo laba – tibxaalaha
- Go 'aamiyaan taran laba – tibxaaleyaasha

Erayo Cusub

- Laba – tibxaale, hal – tibxaale, Badh – isku dhufashada iyo Isirada.

Hordhac

Cuttub – hoosaadkii u horeeyey ee cuttubkan Ardayda waxaa lagu baray Erey – bixino la xidhiidha cuttub – hoosaadka oo muhiim ah sida:- tibxo, hal – tibxaale, laba – tibxaale iwm, waxaa jira tibxo la mid ah oo ay ka midyihin seddex – tibxaale, tibxaale iyo sidoo kale. Qeybtan Ardaydu waxay ku baran doonaan sida laysugu dhufto hal – tibxaale, haltibix oo tibaax aljebraad laba tibxaale, iyo tibaax aljebraad oo leh laba tibxood iyo sidoo kale raadinta taranta laba laba – tibxaaleyaal.

Gudbinta Casharka

2.2.1 Isku – dhufashada hal – tibxaale lagu dhufto Laba – tibxaale

Waxaa laga yaabaa inaad Ardyda u sheegta in xeerka isku – dhufashada ee loo Adeegsaday ku dhufashada lagu dhufta hal – tibxade laba tibxaale uu yahay xeerka kala dhiga isku – dhufashada ee isu – geynta.

Haddaad weydiiso Ardayda maxsuulka $3 \times (4 + 5) = 3 \times 9 = 27$ waxay ku jawaabi 27, ha ku dhuftaan 3 wadarta 4 iyo 5 taas oo ah 9 ama ha ku dhuftaan midkasta oo ka mid ah tirooyinka ku jira qowska 3 dabadeedna ha isu geeyaan.

Sida:- $3 \times (4 + 5) = 3 \times 4 + 3 \times 5 = 12 + 15 = 27$ fikrada cusub ee laga yaabo in halkan lagu baro waa in tibaaxaha aljebraad ee ay ku jiraan doorsoomeyaashu ay qaadan karaa tiro saafi ah ama madoorsoome.

Ardaydu waxay sii yaqaaneen sida laysugu geeyo tibxaha isu midka ah,

Tusaale ahaan:- $x + 2x = 3x$

Waxaa laga yaabaa inaad doorbidid hab kale sida:-

$$x + 2x = 1 \times x + 2 \times x = (1 + 2)x = 3 \times x = 3x$$

Tani waxaad bari kartaa taranta doorsoomaha x kaasoo ah hal – tibxaale iyo wadarta labada tiro

Talaabada ku xigta waxaad tixgalin laba xaaladood.

3. Isirka hal – tibxaalahi ahi waa tiro sida kuwa ku jira qowska dhexdiisa

$$3(x + 5) = 3x + 15$$

Noocaan waxaad bari kartaa Adigoo u qoraya

$$3(x + 5) = (x + 5) + 5 + (x + 5)$$

$$= (x + x + x) + (5 + 5 + 5)$$

$$3x + 15$$

4. Isirka hal – tibxaaluhu waa tiro, tibxaha qowsku ku jiraana waa doorsoomeyaal

$$3(x + y) = 3x + 3y$$

Halkan waxaad ku bilaabi kartaa

$$3(x + y) = (x + y) + (x + y) + (x + y) = 3x + 3y$$

Dabadeedna waxaad u gudbi kartaa si guud ahaaneed

$$a(x + y) = ax + ay$$

looma baahna a inay ahaata tiro tirsiimo.

Waxa ku xiga ee aad siinaysaa waa Raadinta taranta hal – tibxaale iyo laba – tibxaale taasoo mid ka mid ah tibxaha laba – tibxaaluhu uu yahay doorsoome sida isirka hal – tibxaalahi.

Tusaale ahaan: $x(x + 2) = x^2 + 2x$ Ama $x(y + 2) = xy + 2x$

5. Dabadeed tixgali marka laba – tibxaalahi t iyo labadeeda tibxoodba yihiin doorsoomeyaal.

Tusaale ahaan: $x(x + y) = x^2 + xy$

6. Ugu dambeintii tixgali xaalada (marka) tibxaha laba – tibxaalahi iyo hal – tibxaaluhuba ay yihiin si guud.

Tusaale ahaan: $3xy(2x + 4y) = 6x^2y + 12xy^2$

Ogow:

Waa inaad ku bilwdaa tusaale muuqda oo fudud, dabadeedna aad timaado maxsuulka ama gabagabada

Tusaale ahaan:

Maraaci kartid si aad u heshid tarnanta $\sqrt{3}(x + 5)$ si aad uga shaqeysay $3(x + 5)$ ee ahaa $3(x + 5) = (x + 5) + (x + 5) + (x + 5) = (x + x + x) + (5 + 5 + 5) = 3x + 15$

5. $\frac{1}{2}(9-x) + \frac{1}{3}(2x+7) = \frac{5}{2} \quad \text{Dh.Y.W } (2, 3, 2) = 6$

$$\Rightarrow 6 \left[\frac{1}{2}(9-x) + \frac{1}{3}(2x+7) \right] = 6 \left(\frac{5}{2} \right)$$

$$\Rightarrow 3(9-x) + 2(2x+7) = 3(5)$$

$$\Rightarrow 27 - 3x + 4x + 14 = 15$$

$$\Rightarrow x + 41 = 15 \Rightarrow x = 15 - 41 = -26$$

3.1.3 Adeegsiga Furfurista Masalooyin ka Isle'egta Toosan

- Ka caawi ardayda inay dhamaan tood kudhaqaaqaan (sameeyaan) tadaabooyinka hoose ay furfuran masalooyinka adeegsiga isle'egta toosan.
 1. Fah mida (garasho) masalo
 2. Dhamaan liiska tirooyinka aan lagaranayn ee adeegsiga masalooyinka doorsoome, (dheh, x, y, z , i.w.m.)
 3. Adeegsiga doorsoomayaasha aasaaska isle'egta taasoo ah ka baaraan degida xidhii dhka ka dhexeeya tirooyinka la siiyay iyo kuwa lawaydiiyay ardayda.
 4. Xalinta ama kashaqaynta isle'egta.
 5. Hubinta Natijjada.
 6. Jawaab ka bixinta macquulka ah ee su'aasha.
- Ku dhiirigalinta ardayda si ay usameeyaan karaan erayga fur furista isle'egta ee la soo darista nolol maalmeedka macnaha si ay ugashaqayn karaan.

Fur Furista ama (xalka) Hawlgalka 3.4

- Ogow x Haday utaagan tahay tiro jirta markaa kadib labooduba waxay noqon karaan jiro oyin jira (lahubo) = $2x$, iyo shan waxayka badan $2x = 5 + 2x$. Tani oo noqonaysa 21 maadaa ma fur furista isle’egtani tahay.
 $5 + 2x = 21 \Rightarrow 2x = 16 \Rightarrow x = 8$
Sidaa darteed jawaabta tirada waa 8.
- Ogow in ℓ ay tahay dhererka laydi “W” aytahay ballaca.

Markaas ballacu haduu 3 kayar yahay

dhererka taasmacnaheedu waa

$$W = \ell - 3$$

Hadii wareegu = $2\ell + 2w$ wuxuu noqon lahaa

$$\text{Taasoo ah } 2\ell + 2w = 20 \Rightarrow 2(\ell + w) = 20 \Rightarrow \ell + w = 10$$

$$\Rightarrow \ell + (\ell - 3) = 10 \quad (\text{Isticmaal } w = \ell - 3)$$

$$\Rightarrow 2\ell - 3 = 10 \Rightarrow 2\ell = 13 \Rightarrow \ell = \frac{13}{2}$$

$$\text{Imika, } w = \ell - 3 \Rightarrow w = \frac{13}{2} - 3 = \frac{13 - 2(3)}{2} = \frac{7}{2}$$

Jawaabaha Layliska 3.3

- Ogow x haday noqoto tiro aan lagaranayn markaas waxaan ufasiraynaa (udhigi karnaa).

$$12 + 3x = 0$$

$$3x = -12$$

$$x = -4$$

Markaa Tiradaasi waa -4.

2. Ogow x = cabir qiyaaseed dhulka marka ugu horaysa lacarro roggay (laqoday).

y = cabir qiyaaseedka dhulka marka labaad lacarro rogay.

z = Cabir qiyaaseedka dhulka marka sadexaad laqoday.

Dhulka laqoday dhamaan tiina yahay 8.4 HKT taasoo ah.

$$x + y + z = 8.4 \text{ Hektaris} \dots \dots \dots \quad (1)$$

Dhulka marka labaadka laqoday 0.8 hika ayuu kabadnaa kiimarkii ugu horaysay laqoday taasoo ah,

$$y = 0.8 + x \dots \dots \dots \quad (2)$$

Kadhib qiiimaha y halka (1), aan helnay oo noqon sidan

$$x + (0.8 + x) + z = 8.4$$

$$\Rightarrow 2x + 0.8 + z = 8.4 \dots \dots \dots \quad (3)$$

Kabacdi carro roga (qodaalka) saddexaad 0.5 hektar ayuu kabadnaa ka labaad taasoo noqaysa.

$$z = 0.5 + y$$

$$\Rightarrow z = 0.5 + (0.8 + x) \quad (\text{Uqaado in } y = 0.8 + x \text{ halkii (2)})$$

$$\Rightarrow z = 1.3 + x \dots \dots \dots \quad (4)$$

Habdaba uqaad qiiimihii z halka isle'egta z (3), waxaan helaynaa

$$2x + 0.8 + (1.3 + x) = 8.4$$

$$\Rightarrow 3x + 2.1 = 8.4$$

$$\Rightarrow 3x = 8.4 - 2.1 = 6.3 = \frac{63}{10}$$

$$\Rightarrow x = \frac{1}{3} \times \frac{63}{10} = \frac{21}{10} = 2.1$$

Hadana in aad ugashaqayso halkii (2) iyo (3) waxaan helaynaa

$$y = 0.8 + 2.1 = 2.9, \text{ iyo}$$

$$z = 1.3 + 2.1 = 3.4$$

Sidaa darteed markii koobaad waxaa laqoday 2.1 hi

3. Maskaxda kuhay Qiimaha kharashka ganacsaduhu uu Bixiyay si uu uhelo dallado ayaa ah $3,250 + 25 = 3,275$.

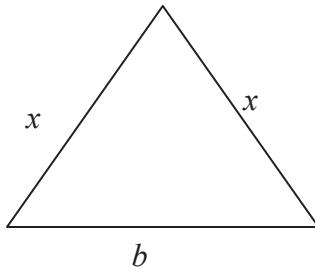

Hadii aan ukala qaadno tiro dhan 50 dalladood wax aynu heli

$$3,275 \div 50 = 65.5$$

Maadaama qiiimaha kharashka kubaxay dalladaha uu yahay Birr 65.50 m

Sidaas darteed hadii faa iidada dallad kasta looga baahan yahay ay tahay Birr 2.50, markaa kadib giimaha iibkaa waa in uu le, ekaado
 $\text{Birr } 65.50 + 2.50 = \text{Birr } 68.00.$

4. Labada dhinac ee sadexagal labaale wey isleegyihii sidaas awgeed kasoo qaad dhinacyada bedka x ; iyo kasoo qaad in uu dhererka utaagan yahay salka sidaas derteed, x waa 1.5 oo laga dhererka salka macanheeduna, $x = 1.5 b$

Lakin markasta oo lagu siiyo sadexagalka waa 64. Sidaas awgeed

$$x + x + b = 64$$

$$2x + b = 64$$

$$2(1.5 b) + b = 64 \quad (\text{madaama } x = 1.5 b)$$

$$\Rightarrow 3b + b = 64$$

$$\Rightarrow 4b = 64 \Rightarrow b = 16$$

$$\text{yoo } x = 1.5 b \Rightarrow x = 1.5 \times 16 = 24$$

Sidaas awgeed labada dhinac waxay yihiin 24 sm midkiiba dhinaca sadexaa dna (salka) waa 16 sm.

5. Kasoo qaad in $x = xadi$ uu arday kasta uu bixiyey. Tirada guud ee ardeyda waa $20 + 18 = 38$, oo mid kasta uu bixiyey x sidaas awgeed 38 arday waa $38 \times x = 38x$ Birr.

Isugeynta xadigan oo loo geeyey 100 Birr oo ay bixiyeen foonmisteradu waa in ay ahaato 2000 birr taas waa

$$38x + 100 = 2,000.$$

$$\Rightarrow 38x = 2000 - 100$$

$$\Rightarrow 38x = 1900 \Rightarrow x = \frac{1900}{38} = 50.$$

Taasi waxay tahay arday kasta waxa uu bixiyey Birr 50 sidaas awgeed xadiga lacageed ee ay bixiyeen 20 gabdhood waa $20 \times 50 = 1000$ Birr.

6. Kasoo qaad x inay utaagantahay tirooyinka bilaha ee (kaydinta) (dhiteyn) markaa kadib kaydinta Birr 12 ee bilkasta ee (x) ee xadiga bilkasta la bixiyo waa $12x$ Birr isugeynta xadiga oo loo geeyey 14 Birr oo ku sii jirey sanduuqa ayaa waxaa loo ga baahan yahay in ay noqoto 110 birr taasi waxay tahay
- $$12x + 14 = 110$$

$$\Rightarrow 12x = 110 - 14 = 96 \Rightarrow x = \frac{96}{12} = 8$$

Sidaas awgeed waxay qaadatey 8 bilood siloo kaydiyo 110 birr.

Waxa Ardayga laga rabo

Awood xirfadeedyada (kartida)

- Adeegso calaamada dheeliga $\geq iyo \leq$ astaantan si loo xaliyo.
- Xali dheeleyada tooska ah horgalaha taban adigoo ku cabiraya xeerka isbedelka dheelyada toosan.

Hordhac

Cutub hoosaadkani waxa uu muujinaya tabaha xalinta dheeliyada toosan xeererka intooda badan ee aynu udeegsano si aan u xalino dheeliyada toosan waxay la mid yihiin xeerarka isku dhignaanta isbedelada ee lagu cabiro si loo xaliyo isle egta toosan, sidaas darteed aqoonta ay ardaydu ka heshey xalinta isle, egyada toosan aad ayay faaiido badan ugu leedahay ardayda.

Nuxurka waxbarista

Waa in ay ahaato falanqaynta cashirka kasoo qaad ardaydaadu in ay haystaan masalooyin ku lugleh dheeliyada kana caawi iyaga si ay xal ugu heli lahaayeen iyaga leftooda. Hawlgalka fasalka ee 3.9 waxaa looga jeedaa ujeedadan kadib hawlgalka fasalka, bar afarta calamadood ee dheelyada taas waxay tahay “ $<$ ”, “ \leq ”, “ $>$ ”, “ \geq ” oo tibaax weedh masaladeeda kulugta leh hawlgalka fasalka 3.9 adigoo adeegsanaya dheeliyadan.

2. Si cadloo qeexi karo (jawaabta 35)
3. Kasoo qaad x in ay u taagan tahay dadka qofka codka bixin kara doorashada.
Sidaas awgeed kazoo qaad in ay abahaa kayer yahay x waa in uu unguyaraan ahaado laba laabka sagaal taasi waa $x \geq 2 \times 9 = 18$.
Sidaas awgeed da’da qofka codeynkara waa 18 ama in kabadan.
4. kasoo qaad $x =$ tirada buugta ardayda ee aad iibsato, maadaama qiim aha midkasta uu yahay 7 Birr, x waxay u taagantahay qiimaha buugagta ardayda $7x$ Birr qiimahan kama bednaan karo waxaad heystaa waa, $7x \leq 50$
Sidaas awgeed, x kama weynaan karto 7.
Taasi waa, tirada ugu badan ee buugagta aadku iibsan karto 50 Birr waa 7.

$$\Rightarrow 7x \leq 38$$

Sidaas awgeed ma awoodid in ka badan shan buugta qoraalka, taasi waxay tahay tirada ugu badan ee buugta qoraalka ee aad iibsan kartaa waa shan. Xeererka si loo xaliyo dheeliyada toosan aad bay iskugu dhowyihii xeererka xalinta isle, egyada, gaar ahaan xeererka laga xaliyo dheeliyada tooson ee leh horgalayaasha togan waxay lamid yihin isle, egyada toosan marka laga reebo isbedelka calaamada isle ekaasha.

Iyadoo lagu bedelayo dheeliyada si loo caawiyo ardayda xeererkan looguna dhiirigaliyo in ay ka qaybqaadtaan shaqo kooxeedka 3.2.

Kadib shaqo kooxeedka iyo soo jeedinta labada xeer taas oo ah.

Xeerka 2: astaanta iskudhufashada/isuqaybinta ee tirada togan, felankee tusaallooyin farabadan oo suurogal ah si loo xaliyo dheeliyada toosan ee leh. Horgalaha togan, ka caawi ardayda si ay uqoraan xeerka lagu cabiro si ay ubedelaan. Dheeliyada toosan aayar aayar ilaa doorsoomuhu uunoqdo mid ku takooran hal dhinnac oo ah calaamada dheeliga hab lamid ah ee xaalada xalinta.

Kadib marka ay ardayda fahmaan sida loo xaliyo dheeliyad toosan ee leh horgalaha togan ka caawi ardaydaada si ay uqoraan xeerka labaad ee kor kuxusan in aanu si toos ah ugu habooneyn, dheeliyada toosan ee leh horgaleha taban sidaas awgeed waydii ardaydaa in ay ku cabiri karayaan xeerka labaad si ay u xaliyaan hada ardaydautoos ah ha u cabiraan xeerka labaad, markaa kadib shaqadooda waxaa laga yabaa in ay noqoto sidan

$$-2x < 6$$

$$\frac{-2x}{-2x} < \frac{6}{-2}$$

$$x < -3$$

Markaa kadib, weydii ardeydaa da in ay hubiyaan jawaabtaada, sidaas awgeed hadii $x = -4$ ta lagu bedello meesha x ee dHEELIGI hore, markaa waxaynoqon sidan $(-2)(-4) < 6$

8 < 6 (Suuroalma, aha)

Tani waxay ardayda ka caawindoontaa inaya qoonsadaan baahida xeerka kale ee ku haboon maashada marka dHEELIGU ku lug leeya hay horgalaha taban hadaba dhinaca taban, adigoo adeegsanaya dhowr tusaalle ka caawi ardayda si ay u fahmaan in iskudhufashada ama isuqaybinta ee labada dhinac ee dHEELIGA ay ku yihiin dHEELI isku calaamad ah waxaa laga yaabaa in aad adeegsato sida tusaalle la bixiyey $0 < 3$ hadii aynu labada dhinac ku dhufano -1 , waxan heleyntaa $0 > -3$ taas waxaa la mid ah hadii lagu siiyo $-2 < 6$ hadii aynu uu qaybino labada dhinac -2 waxaan heleyntaa

$$\frac{-2x}{-2x} > \frac{6}{-2} \text{ ama } 1 > -3.$$

Kadib adigoo hubinaya in ay ardaydu fahantey saameynta iskudhafashada ama isuqaybinta ee labada dhinac ee dHEELIGA leh tirada taban tani waa xiliga laga sheego xeerka sadaxaad ee ku saabsan astaanta isku dhufashada ama isuqeybinta ee tirada taban, tan kadib, ku dhiirigli kanacaawi ardaydaada si ay ugu cabiraan xeerkan xalinta dHEELIYADA toosan ee leh horgalayaasha taban sida kuwa lagu bixiyey buuga ardeyga.

3.3 KULANKA DHIDIBADA KAARTIS

Waxa laga rabo ardayga

Marka uu dhamaado cutub hoosaad, Ardayda waxay awoodi doonaan:

- *sawiraan afarta waaxood ee sallax kaartis iyo astayta barta eber, dhidibka, x iyo dhidibka y.*
- *jeexaan baraha kulan dhidibada kaartis iyagoo sheegaya kulankood.*
- *Akhriyaan kulan barkasta oo kamida sallaxad kulan ka kaartis..*

- *Raadi isle’egta laxidhiidha kulan ee lagu siiyey ururka lammaanaha horsan.*
- *Raadi isle’eg xariiqda kakooban baraha lagu siiyey.*

Hordhac

Filisofar faransiis ah oo la odhan jiray Rene, Descarts (1596 - 1650) ayaa wuxuu soo saaray halka ay bar kadhxado salaxa. Isaga oo u kasooocaya fogaanta tooska ah ee udhaxaysa labada tiro xariiqeed. Habkani waa mid aad ufudud, faa iido badan oo aad u qotodheer kaas oo aan waligii labadalin waxaana looyaqaanaa kulanka dhidibada kaartis hadaba cutub hoosaadkan waxaan xooga saaraynaa fikradaha akhrinta kulan baraha ee salaxa kulanka kaartis, inaga oo sawirayna xariiqda toosaan ee isle’egteedutahay $x = a, y = b$ iyo $y = mx$.

Gudbinta Cashirka

Bilawga cutub hoosaadka, waa inaad dhiirigalisa a digoo kobcinaya oo caawinaya iney minguuriyaa qdobada ugu muhiimsan, ee faa iidada uleh shaqo fasalka 3.12 ee ardayda lagu siiyey buuga ardaygaa adbay ugu fiican tahay ardayda waxayna ka caawiney saa cashirkan, sida akhrinta iyo dhisida baraha kulan ka sallaxa, kadib markaad dhamaysid shaqo fasalka ardayda 3.12, ardayda ka caawi siday tirooyinka ugu isticmaali lahaayeen tirada baxtaay kadhacdo baraha xariiqda. Tirooyinka xariiqda (tirooyin taban, O, tirooyintogan) kuwaa oo loo isticmaalo barta ay barahu dhacaan ee, xariiqda waxaana loo yaqaanaa kulan dhidibada kaartis sidaas darteed dhis habka kulanka oo hubi iney ardaydu, ururin karaan tirooyinka baraha ay kadhacaan xariiqda tirada.

Ka dib marka aad ku nakhtiitid habka kulanka ee xariiqda tirada, muuji inay isu egyihiin kuwa aad isku aadisay iyo inkale oo ay yihiin habka kulanka oo kakooban lammaane horsan (x, y) barta salaxa kamida adigoo isticmaalaya laba xariiq tiro oo

Ardayda xusuusi in kulan ka dhidibadu uu salaxa u qeybiyo afar qeybood oo looyaqaano:- waaxo markaa kadib ardayda waxaad utilmaan taa iney qeexaa calaamada kulanamada (x, y) ee waaxdkasta, kadibna ardayda ka caawi iney ogaadaan in waaxda 1^{aad} labada kulanba ay yihiin toganeyaal, waaxda 2^{aad} kulan (x) uu yahay tabane, kulan ka (y) uu yahay togane.

3.3.2 Kulamada iyo Xariiqda toosan

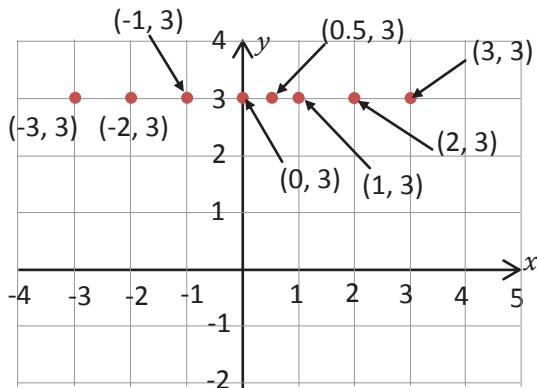

Ardaydu ha ku bilaa baan shaqo fasal 3.13. shaqo fasalka ardayda waxay ka caawin iney ardaydu dhisaan baraha xariiqda jiifka ee dhidibka y uuyahay madoorsoomaha ($y = 3$) iyo baraha xariiqda qotanka ah kaas oo dhidibka x uuyahay madoorsoomaha ($x = 3$) haday si fiican uqabtaan ardayda waxay kacaawin iney xusuustaan dhamaan baraha uu dhidibka y , ($y = 3$) marka dhidibka x yahay tiro kasta oo tiro lakab ah taasoo xariiqdu marto (0, 3). Hawlgalkani wuxuu ka caawinayaan sidaas silamida iney uga shaqeeyaan dhidibka x , $x = 3$.

Kadib marka ay ka shaqeeyaan shaqo fasalka 3.13, ardayda u tilmaan iney sawiraan xariiqaha jiifa kuwaas oo isle'egtoodunatahay $y = c$, marka $c \in Q$, iyo xariiqda qotonka ah ee isle'egteedu tahay $x = c$, marka $c \in Q$. Marka ay ardaydu sawirayaan ka caawi inaad u sheegtid inay samaayaan shaxda qiimaha x iyo y kuwaas oo ina siinaya isle'egta qiimaha aan u isticmaalayno sawirka xariiqda tiro ee la ina wey diiyey.

Hadaba waxaad, hubisaa dhamaada cashirkan iney fahmeen $y = c$, marka $c \in \mathbb{Q}$, aytahay isle'egta xariiqda jiifka taas oo iskajarta dhidib $y, (0, c)$; halka $x = c$. marka $c \in \mathbb{Q}$, ay katahay isle'egta xariiqda qotonka ah ee dhidibka x , ee iskajarta $(c, 0)$.

Xisadaha: 12xiso

Waxa ardayda laga rabo:

Dhamaadkacutub-hoosaadkan, ardaydu waxay awood u yeelan doonaan in ay:

- *U adeegsadaan aragtiinka Yukliidh iyo rogaalkiisa ku furfurashada su'aalaha ka hadlaya*

Hordhac

Waxa laga soodiiray saddexagalada isu'eg ee u sameeyey joogga lagaga soo qotomiyey shakaalka xagasha quman ee saddexagal xagal quman.

Qaybta hore ee cutub-hoosaadkani waa soodiiridda iyo ku dabiqidda aragtiinka yukliidh gaar ahaan ku soo saaridda dhinacyada aan la ogayn.

Qaybta labaadna waxa lagu bandhigay xigista iyo u adeegsashada aragtiinka Baytogras, oo si dheeri ah loogu yeelay tusaalooyin ku habboon islamarkaa ku filan.

7.1.1 Aragtiinka Yukhidh iyo Rogaalkiisa

Fekradaha Barista

Hawlgal 7.1 ayaa looqorsheysay si aad ugubandhigto aragtiinka Yuklidh ka dibna aragtiinka Baytogras.

Si aad u bilawdo casharka, waxaa kuu suuragal ah inaad weydiiso weedho furan.

Waydii ardayda inay soo saaraan bedadka laydiyo aad ku kala magacowdo A, B, C iyo D. Arday kasta waxa laga rabaa inuu soo saaro bedka laydi walba.

Ku dhiirigeli ardayda siday si nadaamah ugu soo hagmi lahaayeen aragtiinka Yukliid. Tusaale ahaan, bedka dhulka u leeyahay A waa $(30m)^2=900m^2$ Taasi waxay tusaysaa in $RQ^2=RS \times PR$ waxa sidoo kale, bedka B waa $(40m)^2=1600m^2$ iyo bedka

$$C \text{ waa } 32m \times 50m = 1600m^2$$

$$t.a (40m)^2 = 32m \times 50m$$

Mar kale, tani waxay muujisaa in $PQ^2=PS \times PR$ weedha furan loo isticmaali karo oo lagu bandhigkaro aragtiinka Baytogras kolka la barayo cutub- hoosaad 7.1.2

Si falanqaynta loo gunaanado ayaa halkan waxaad ku siin kartaa fufurista weedha.

Jawaabta weedha furan

1. Badka dhul beereedyada ay kala leeyihiin A waa $900m^2$; B waa $1600m^2$, C waa $1600m^2$ iyo D waa $900m^2$.
2. Beeroleyada waxay leeyihiin dhul beereedyo bedad kala duwan.
3. A iyo B waa $900m^2 + 1600m^2 = 2500m^2$ dhul ah, C iyo D waa $900m^2 + 600m^2 = 2500m^2$ dhul ah.

Bedadka dhulka ay laba kasta ay leeyihiin waa isku mid ka hor intaan la gudagalin shaqada hawlgal 7.1. Hubi inuu arday walba sawiri karo saddexagal xagal quman una ku qori karo addimada iyo shakaalka. Tan waxay u qabsoomi kartaa tii oo afka laga waydiinayo ardayda sida jaantus 7.2, waa kee xagasha qumani? kee ayaa ah addin: shakaal: iwm

Haddaba, su'aalaha 1, 2 iyo 3 waxaa lagu falanqayn karaa af ahaan. Gudagalka su'aasha 4, ardaydu waa in ay garowsan yihiin saddexagalada isu'eg iyadoo lagu dhiirigalinayo si ay u sheegaan hawraaraha kuwa ka dhigaya saddexagalo isu'eg. Su'aasha 5 dhexdeeda, ardayda ku hag u isticmaalida saamiyada dhinacyada gudboon si ay u sahamiyaan aragtiinka yukliidh.

Halkan, shaqada waxa loo fidin in ardayda lagu hoggaamiyo sidii loo soo gunaanadi lahaa in xeerku ku run yahay saddexagal xagal quman kasta

Jawaabaha hawlgal 7.1

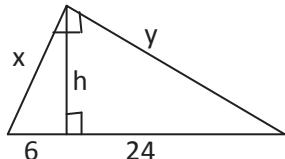

1. Laba saddexagal quman cusub ayaa sameysmey.
2. ΔADC iyo ΔBDC
3. b. $\angle A \cong \angle BCD$ t. $\angle B \cong \angle ACD$

5. b. $a^2 = cb_2$, maadaama dhinacyadu ay isku saamigalsanyihiin
t. $b^2 = cb_1$

Siinta furfurista hawlgal 7.1 ka dib u sheeg aragtinka yukhiidh oo kala xaajoo tusaalooyinka ayka shaqeeyaan fasalku. Ama kooxo. Ku shaqaynta tusaalooyinku waxay ardaydu ka helayaan awoodo kolkey baranayaan ku salaysan jawaab celin u sii masalooyin laylis ahaan ardayda liidata iyo kuwa kaleba.

7.2.2 Qiimeyaasha saynka, kosaynka iyo Taanjantka xaglaha 45° , 30° iyo 60°

Waxa ardayda laga filiyaa inay ku keenaanshaqada hawlgalka 7.4. qiimeyaasha. Tani waxaa lagu dhiirigalin karaa arday kastaa inuu baadhis kaga helo saamiyada tirignoomateriga hawlgalka inta lagu jiro. Waa inaad ku daysaa ardaydu inay gunaanadaan saynka, kosaynka iyo tanjantka $\angle A$ iyo $\angle B$.

Dhamaadka hawlgalka 7.4 ka dib, waydii ardayda qaarka midah inay sheegaan qiimayaasha saamiyada trignoomateri ee ay soo saareen.

Waxa suuragal ah in ardayda qaarkood ay adeegsadeen aragtiiinka Baytogras, qaar koodna ay shakaalka ku cabbireen mastarad.

Ardaydu waxay u baahan yihiin inay ka wada hadlaam faraqyadani islamarkaa ay ku gaadhaan ama go'aamiyaan saamiyad trignoomateri hufan.

Falanqaynta fasal ama shaqo kooxeed waa in uu u dhacaa hubantida ah in badanka saamiyada lagu helay baadhista ay isku mid yihiin.

Hawlgal 7.5

Hawsha hore waa hubaasha in ardaydu ay sawireen saddexagal labaale ah oo addimadu ay yihiin 10cm iyo in kale.

1. Ardaydu waxay soo saari dhererka shakaalka iyagoo istic-maalaya aragtiinka Baytogoras. Wuxaa tani u isticmaali kartaa mudnaan. Waa inay ugu horaanta cabbiraan oo ay helaan ugu dhawaanta saamiyada trigonomateri ee.
2. $m(\angle A) = 45^\circ$ iyo $m(\angle B) = 45^\circ$
3. $\sin A = \cos A = 0.5$
 $\tan A = 1$
4. Waydii ardayda saamiyada trigonomatriga xaglaha 45° . Ugu dambeyn tus saamiyada trigonomateriga xagasha 45° oo hubi. Haddana la falanqee tusaalooyin ka fasalku ama koox ay ka shaqeeyeen.

Jawaabta Hawlgalka 7.5

Sayinka, koysayinka iyo taanjantka 30° iyo 60° xaglo ah. Ardayda waxa laga filayaa inay isticmaalaan habka lagu tusay Xagasha 45° Hawsha hore waa in la awoodssiyo ardayda si ay u sawiraan saddexagal leh 30° iyo 60° xaglo ah. Tani waxaynun siisaa fursadda inay sawiraan ama dhisaan saddexagalka qumanee leh xaglaha fiiqan ee 30° iyo 60° .

Jawaabta Hawlgalka 7.6

1. Waa inaad hubisaa in ardaydu ay haystaan qalabyada loo baahan yahay. Sida u tilmaamey buugga ardaygu ujeedada hawlgalku waa in lasoo saaro saamiyada trigonomateriga xaglaha ah 30° iyo 60° . Xaglaha 30° iyo 60° waxa sameeya saddexagal siman iyo joogga. Sababtani awgeed waa inay ardaydu awoodaan dhisitaanka saddexagal siman. Cabbirka dhinac kasta waa 4cm maadaama dhinac kastaa yahay gacan. Haddaba nooca saddexagalku waa saddexagal siman. Kolkaa cabbirka xagal kastaa waa 60°
2. Dhererka joogga waxa lagu cabbiran karaa ugu dhawaanta dhowr god. Ardayda qaarkood waxay ku soo saari cabbiridda hufan tii oo la isticmaalayo aragtiin ka Baytogras sida soo socota:
 - b. $CD^2 + BD^2 = AC^2$
 $CD^2 + 2^2 = 4^2$
 $CD^2 = 12$
 $CD = 2\sqrt{3}$
 - t. cabbirka xagasha $\angle ACD$ waa 30° .

$$\begin{aligned}\sin A &= \frac{CD}{AC} & \cos A &= \frac{AD}{AC} & \tan A &= \frac{CD}{AD} \\ &= \frac{2\sqrt{3}}{4} & &= \frac{2}{4} & &= \frac{2\sqrt{3}}{2} \\ &= \frac{\sqrt{2}}{3} & &= \frac{1}{2} & &= \sqrt{3} \\ \text{j. } \sin(m(\angle ACD)) &= \frac{AD}{AC} & \cos(m(\angle ACD)) &= \frac{CD}{AC}, \tan(m(\angle ACD)) &= \frac{AD}{CD} \\ &= \frac{2}{4} & &= \frac{2\sqrt{3}}{4} & &= \frac{2}{2\sqrt{3}} = \frac{1}{\sqrt{3}} \\ &= \frac{1}{2} & &= \frac{\sqrt{3}}{2} & &= \frac{\sqrt{3}}{3}\end{aligned}$$

3. Waxa cad in $\angle A \equiv \angle B$ islamarkaa $\angle BCD \equiv \angle ACD$, sida $\angle A$ iyo $\angle B$ ay ku yeesheen qiimo trigonomateri isku mid ah. Iyana $\angle BCD$ iyo $\angle ACD$ waxay leeyihiin fansaaro trigonomateri isku mid ah. Waxaa dheeri ah, waxaad si toos ah ugu hagi kartaa ardaydu inay soo saaraan saynka, kosaynka iyo taanjantka xaglaha 30° iyo 60° .

Jawaabaha laylis 7.4

1. b. Markaa $45^\circ = \frac{5m}{\ell}$

$$\sqrt{3} = \frac{10m}{w}$$

$$w = \frac{10m}{\sqrt{3}}$$

$$w = \frac{10\sqrt{3}}{3}$$

$$w = 5.7735$$

Kh. Ka soo qaad balladhka hارت in uu yahay w kolkaa taan $30^\circ = \frac{w}{7km}$

$$\frac{\sqrt{3}}{3} = \frac{w}{7km} \quad w = \frac{7\sqrt{3}}{3} km.$$

2. Dhinacyada la amaara deeyey waxaalagu soo saari karaa xaqiiqooyinka kale ee aan aheyn saamiyada tirignometariga. Tusaale ahaan su, aasha b, $x = 1$ waayo saddex-xagalka waa labaale oo $y = \sqrt{2}$ tioola isticmaalayo aragtiinka baytagras, laakiin hawsha ugu muhiimsan masalooyinka waa kushaqeynta saamiyada tirignomateriga, haddaba ku hogaa mi ardayda si ay u habeeyaan saamiyada tirignometariga.

b. Sayn $45^\circ = \frac{1}{y}$ taan $45^\circ = \frac{1}{x}$

$$x = \frac{3\sqrt{2}}{2} \quad y = \frac{3\sqrt{2}}{2}$$

3. Way caddahay in $m(\angle BAD) = 2\theta$

Haddaba, $2\theta + \theta = 90^\circ$

$$3\theta = 90^\circ$$

$$\theta = 30^\circ$$

Adeegsashada ΔABC , $\tan 30^\circ = \frac{4}{x}$

$$\frac{1}{\sqrt{3}} = \frac{4}{x}$$

$$x = 4\sqrt{3}$$

Adeegsashada ΔABD , $\tan 60^\circ = \frac{BD}{AB}$

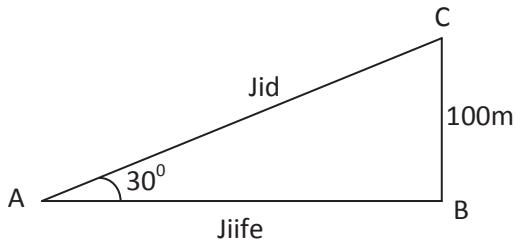

$$\sqrt{3} = \frac{BD}{4\sqrt{3}}$$

$$BD = 4\sqrt{3} \times \sqrt{3} = 4 \times 3 = 12$$

Tani waxay ina siinaysaa $y = 12 - 4 = 8\text{cm}$

Ma tusi kartaa in $AC = DC$?

4. Fiiri Jaantuska 7

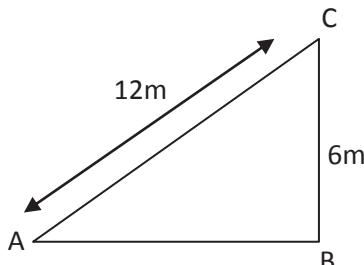

Faraqa u dhexeeuya joogagga barta A iyo barta C waa 100m.

$$\sin 30^\circ = \frac{BC}{AC}$$

$$\frac{1}{2} = \frac{100m}{AC}$$

$$AC = 200m$$

5. Ka dhig xagasha u salaanku la sameeyo dhulka ay tahay A.
